## **DETAILED ACTION**

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - Claims 21-35 are drawn to an attenuated live parasite of the phylum
     Apicomplexa and a vaccine, classified in class 424, subclass 151.1.
  - II. Claims 36-38 are drawn to a DNA fragment encoding a tet-repressor fusion protein, classified in class 435, subclass 69.1.
- 2. The inventions are distinct, each from the other because of the following reasons: Inventions I and II are directed to related different products. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed are distinct as claimed because they have different structures and different uses. Group I is drawn to an attenuated live parasite of the phylum Apicomplexa and a vaccine; and Group II is drawn to a DNA fragment encoding a tet-repressor fusion protein. The groups are directed to physically, structurally and functionally different products, and are therefore patentably distinct, each from the other. For instance, the DNA fragment encoding a tet-repressor fusion protein vaccine

Application/Control Number: 10/526,731 Page 3

Art Unit: 1645

is unlike the vaccine of Group I. Therefore, one group is not required to practice the other. Each group comprises separate and distinct products that are not disclosed as being essential to the utility of the invention.

Furthermore, searching the inventions of groups I and II would impose a serious search burden. The inventions have a separate status in the art as shown by their distinct structure. Thus different products require different searches. A search for is not necessary for a determination of novelty and unobviousness of an unrelated vaccine. Moreover, a search of group II is not required to identify the vaccine of group I. Furthermore, the vaccine of group I may be known even if the DNA of group II is novel. In addition, the technical literature search for the DNA of group II and the vaccine of group I are not coextensive, e.g., the vaccine of group I may be characterized in the technical literature prior to discovery of the DNA of group II.

3. Because these inventions are distinct for the reasons given above, have acquired a separate status in the art as shown by their different classification, and the search required for each group is not required for the other groups because each group requires a different non-patent literature search due to each group comprising different products and/or method steps, restriction for examination purposes as indicated is proper.

Art Unit: 1645

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ja-Na Hines whose telephone number is 571-272-0859. The examiner can normally be reached on Monday-Thursday and alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor Jeffery Siew, can be reached on 571-272-0787. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic .

Business Center (EBC) at 866-217-9197 (toll-free).
